

10 REASONS FOR CHOOSING GFIX

1. Easy and fast installation:
Just click the panels together and that's it.
2. Clean work:
No messing around with glue and no glue residue.
3. Start wherever you want:
You can start in any corner of the room; it makes no difference at all.
4. Industry's leading profile:
Patented UNICLIC[®] profile produced under license of UNILIN FLOORING.
5. No visible joints:
The GFIX tongue and groove connect together perfectly.
6. High moisture-resistance:
The joints of the panels are very tight and the core material has improved moisture-resistant properties. Furthermore, with the "JointShield" technology, spills and wet mopping will no longer damage the cork floor.
7. Ready immediately:
You can walk on a GFIX cork floating floor as soon as it is installed.
8. Reinstallation possible:
The fixing profile is so strong that the panels can be re-installed several times.
9. Quality assurance:
Produced under ISO 9001-2000 Quality Management System and controlled by state-of-the-art process control, inspection and testing procedures.
10. Safe:
Industry's lowest VOC content through the exclusive use of top-quality solvent-free binders and lacquers, as well as low pollutant content class E1 and E0 fibreboards.
